user;

LISTING OF CLAIMS

 (PREVIOUSLY PRESENTED) A method of producing a unique modified account name based on a requested account name that has been determined to already exist, the method comprising:

in a computing environment, receiving a requested account name from a

in a computing environment, selecting a preexisting word element from at least one preexisting list of word elements:

in a computing environment, combining the preexisting word element and at least a stem of the requested account name to produce a modified account name;

in a computing environment, comparing the modified account name with a list of existing account names to determine whether the modified account name is unique; and

in a computing environment, if the modified account name is unique, providing the modified account name to the user for acceptance.

- (PREVIOUSLY PRESENTED) A method as recited in claim 1, wherein the preexisting word element is randomly selected from the at least one preexisting list of word elements.
- (PREVIOUSLY PRESENTED) A method as recited in claim 1, wherein the preexisting word element is an adjective.
- (PREVIOUSLY PRESENTED) A method as recited in claim 1, wherein the preexisting word element is an affix.

 (PREVIOUSLY PRESENTED) A method as recited in claim 1, further comprising producing a second modified account name based on the requested account name

. . .

that has been determined to already exist, the second modified account name being produced by:

randomly selecting a second word element from the at least one preexisting list of word elements;

combining the second selected word element with the at least the stem of the requested account name to produce the second modified account name;

comparing the second modified account name with the list of existing account names to determine whether the second modified account name is unique; and if the second modified account name is unique, providing the second

modified account name to the user for acceptance.

 (PREVIOUSLY PRESENTED) A method as recited in claim 1, further comprising producing a unique seeded account name based on the requested account name, the unique seeded account name being produced by:

combining the at least the stem of the requested account name with a numerical seed to produce a first seeded account name;

comparing the first seeded account name with the list of existing account names to determine whether the first seeded account name is unique; and

if the first seeded account name is unique, providing the first seeded account name to the user for acceptance.

7. (PREVIOUSLY PRESENTED) A method as recited in claim 6, wherein

the seed is a single digit number, the method further comprises incrementing the numerical seed

by one if the first seeded account name is not unique, combining the at least the stem of the

requested account name with the incremented seed to produce a second seeded account name,

comparing the second seeded account name with the list of existing account names to determine

whether the second seeded account name is unique, and if the second seeded account name is

unique, providing the second seeded account name to the user for acceptance.

8. (ORIGINAL) A method as recited in claim 6, wherein the numerical seed

is a multi-digit number that is randomly generated.

9. (PREVIOUSLY PRESENTED) A method as recited in claim 8, further

comprising generating a second multi-digit numerical seed if the first seeded account name is not

unique, combining the at least the stem of the requested account name with the second numerical

seed to produce a second seeded account name, comparing the second seeded account name with

the list of existing account names to determine whether the second seeded account name is

unique, and if the second seeded account name is unique, providing the second seeded account

name to the user for acceptance.

Page 4 of 18

10. (PREVIOUSLY PRESENTED) A method as recited in claim 6, further

comprising combining the at least the stem of the requested account name with both an

underscore and the numerical seed to produce a second seeded account name if the first seeded

account name is not unique, comparing the second seeded account name with the list of existing

account names to determine whether the second seeded account name is unique, and if the

second seeded account name is unique, providing the second seeded account name to the user for

acceptance.

11. (PREVIOUSLY PRESENTED) A method as recited in claim 1, further

comprising:

randomly selecting two further word elements and combining them to

produce a random account name;

comparing the random account name with a list of existing account names

to determine if the random account name is unique; and

if the random account name is unique, providing the account name to a

user for acceptance.

12. (PREVIOUSLY PRESENTED) A method as recited in claim 1, wherein

if the modified account name is not unique, the operations producing the unique modified

account name are repeated for up to a predetermined number of iterations until a unique

modified account name is produced.

Page 5 of 18

13. (PREVIOUSLY PRESENTED) A method as recited in claim 5, wherein

if the second modified account name is not unique, the operations producing the unique second

modified account name are repeated for up to a predetermined number of iterations until a

unique second modified account name is produced.

14. (PREVIOUSLY PRESENTED) A method as recited in claim 6, wherein

if the first seeded account name is not unique, the operations producing the unique first seeded

account name are repeated for up to a predetermined number of iterations until a unique first

seeded account name is produced.

15. (PREVIOUSLY PRESENTED) A method as recited in claim 1, further

comprising combining the requested account name with both an underscore and the randomly

selected word element to produce a second modified account name if the first modified account

name is not unique, comparing the second modified account name with the list of existing

account names to determine whether the second modified account name is unique, and if the

second modified account name is unique, providing the second modified account name to the

user for acceptance.

16. (PREVIOUSLY PRESENTED) A computer-readable medium having

computer-executable instructions for a method of producing a unique modified account name

based on a requested account name that has been determined to already exist, the method

comprising:

selecting a preexisting word element from at least one preexisting list of

word elements:

Page 6 of 18

combining the preexisting word element and at least a stem of the requested account name to produce a modified account name;

comparing the modified account name with a list of existing account names to determine whether the modified account name is unique; and

if the modified account name is unique, providing the modified account name to the user for acceptance.

 (PREVIOUSLY PRESENTED) A method of producing a unique random account name in response to a request by a user, the method comprising:

in a computing environment, receiving a requested account name from a user:

in a computing environment, selecting a first preexisting word element from a database including at least one preexisting list of word elements;

in a computing environment, selecting a second preexisting word element from the database:

in a computing environment, combining the first and second preexisting word elements to produce a random account name;

in a computing environment, comparing the random account name with a list of existing account names to determine if the random account name is unique; and

in a computing environment, if the random account name is unique, providing the random account name to the user for acceptance.

 (PREVIOUSLY PRESENTED) A method as recited in claim 17, wherein the first and second preexisting word elements are randomly selected from the database. 19. (PREVIOUSLY PRESENTED) A method as recited in claim 17, wherein the first preexisting word element is an adjective and the second preexisting word element is a

noun.

20. (PREVIOUSLY PRESENTED) A method as recited in claim 17, wherein

if the random account name is not unique, the operations producing the unique random account

name are repeated for up to a predetermined number of iterations until a unique modified

account name is produced.

21. (PREVIOUSLY PRESENTED) A method as recited in claim 20, wherein

if the unique random account name is produced in fewer than the predetermined number of

iterations, the method further comprising:

selecting further word elements from the database;

combining the further selected word elements to produce a further random

account name;

comparing the further random account name with the list of existing

account names to determine whether the further random account name is unique; and

if the further random account name is unique, providing the second

modified account name to the user for acceptance.

Page 8 of 18

- 22. (PREVIOUSLY PRESENTED) A method as recited in claim 17, further comprising combining an underscore between the word elements to produce a second random account name if the first random account name is not unique, comparing the second random account name with the list of existing account names to determine whether the second random account name is unique, and if the second random account name is unique, providing the second random account name to the user for acceptance.
- 23. (PREVIOUSLY PRESENTED) A computer-readable medium having computer-executable instructions for performing a method of producing a unique random account name in response to a request by a user, the method comprising:

selecting a first preexisting word element from a database including at least one preexisting list of word elements;

selecting a second preexisting word element from the database;

combining the first and second preexisting word elements to produce a random account name;

comparing the account name with a list of existing account names to determine if the account name is unique; and

if the account name is unique, providing the account name to the user for acceptance.

24. (PREVIOUSLY PRESENTED) A computer-readable medium having computer-executable components for producing a unique modified account name based on a requested account name that has been determined to already exist, comprising:

a user interface component for receiving an account name request;

a database component including at least one preexisting list of word

elements and a list of existing account names;

a name generating component for selecting preexisting word elements

from the at least one preexisting list of word elements and combining the preexisting

word elements with at least a stem of the requested account name to produce modified

account names, if the requested account name is not unique when compared to the list of

existing account names; and

a search component for comparing the modified account names with a list

of existing account names to determine whether the modified account names are unique

and, if the modified account names are unique, providing the modified account names to

the user for acceptance.

25. (PREVIOUSLY PRESENTED) A computer-readable medium as recited

in claim 24, wherein the preexisting word elements are affixes.

26. (PREVIOUSLY PRESENTED) A computer-readable medium as recited

in claim 24, wherein the preexisting word elements are adjectives.

27. (PREVIOUSLY PRESENTED) A computer-readable medium as recited

in claim 24, wherein the name generating component randomly selects the preexisting word

elements from the at least one preexisting list of word elements.

Page 10 of 18

28. (PREVIOUSLY PRESENTED) A computer-readable medium as recited

in claim 24, wherein the name generating component further produces a seeded account name

based on the requested account name, the seeded account name being produced by combining

the at least the stem of the requested account name with a numerical seed, the search component

comparing the seeded account name with the list of existing account names to determine whether

the seeded account name is unique, and if the seeded account names is unique, providing the

seeded account name to the user for acceptance.

29. (ORIGINAL) A computer-readable medium as recited in claim 24,

wherein the name generating component further produces a random account name by selecting

two further word elements and combining them, the search component comparing the random

account name with the list of existing account names to determine whether the random account

name is unique, and if the random account name is unique, providing the random account name

to the user for acceptance.

30. (PREVIOUSLY PRESENTED) A method of producing a unique account

name based on a requested account name comprising:

in a computing environment, receiving a request from a user for an

account name:

in a computing environment, utilizing multiple solution sets to produce a

listing of unique account names, wherein there is a limit to the number of iterations for

which each one of the multiple solution sets is utilized, and when said limit is reached a

different solution set is utilized, and wherein said list of account names must contain a

fixed number of unique account names; and

Page 11 of 18

in a computing environment, presenting the user with said listing of

unique names and allowing the user to select one of said listings as an account name:

said multiple solution set comprising:

a first solution set to provide at least one unique account name

based on the requested account name, by combining the requested account name with a

numerical seed;

a second solution set to provide at least one unique account name

based on the requested account name, by combining the requested account name with a

multi-digit seed if one or more previously utilized solution sets did not provide said fixed

number of unique account names within the iteration limit;

a third solution set to provide at least one unique account name

based on the requested account name, by pre-pending the requested account name with an

adjective from a list of words, if one or more previously utilized solution sets did not

provide said fixed number of unique account names within the iteration limit; and

a fourth solution set to provide at least one unique account name,

by combining two word elements from two lists of words, if one or more previously

utilized solution sets did not provide said fixed number of unique account names within

the iteration limit.

31. (PREVIOUSLY PRESENTED) A method of producing a unique random

account name in response to a request by a user, the method comprising:

in a computing environment, receiving a request to generate a unique

random account name from a user:

Page 12 of 18

in a computing environment, providing without any input or suggestion of names from the user, a list of multiple alternate unique account names; and

in a computing environment, providing the user with the ability to select any one of said alternate unique account names, enter a new string for use as an account name or request an automated generation of a new list of multiple alternate unique account names.

32. (PREVIOUSLY PRESENTED) The method of claim 1, further comprising:

receiving an acceptance of the modified account name from the user.

 $\mbox{33.} \qquad \mbox{(PREVIOUSLY PRESENTED)} \qquad \mbox{The method of claim 17, further} \\ \mbox{comprising:} \qquad \mbox{}$

receiving an acceptance of the random account name from the user.

- 34. (PREVIOUSLY PRESENTED) The computer-readable medium of claim 24, wherein the user interface component is also for receiving an acceptance of one of the modified account names from the user.
- ${\it 35.} \qquad {\it (PREVIOUSLY\ PRESENTED)} \qquad {\it The\ method\ of\ claim\ 1,\ further}$ comprising:

receiving an alternate requested account name from the user.

36. (PREVIOUSLY PRESENTED) The method of claim 17, further comprising:

receiving an alternate requested account name from the user.

- 37. (PREVIOUSLY PRESENTED) The computer-readable medium of claim 24, wherein the user interface component is also for receiving an alternate requested account name from the user.
- 38. (PREVIOUSLY PRESENTED) The method of claim 1, further comprising:

receiving a request to generate an alternate account name from the user.

39. (PREVIOUSLY PRESENTED) The method of claim 17, further comprising:

receiving a request to generate an alternate account name from the user.

- 40. (PREVIOUSLY PRESENTED) The computer-readable medium of claim 24, wherein the user interface is also for receiving a request to generate an alternate account name from the user.
- (PREVIOUSLY PRESENTED) The method of claim 1, wherein the preexisting word element is a noun.
- (PREVIOUSLY PRESENTED) The method of claim 1, wherein the preexisting word element is a noun stem.
- (PREVIOUSLY PRESENTED) The computer-readable medium of claim
 wherein the preexisting word elements are nouns.

44. (PREVIOUSLY PRESENTED) The computer-readable medium of claim

24, wherein the preexisting word elements are noun stems.

45. (PREVIOUSLY PRESENTED) The method of claim 1, wherein the

method is repeated until a predetermined number of modified account names is produced.

46. (PREVIOUSLY PRESENTED) The method of claim 17, wherein the

method is repeated until a predetermined number of random account names is produced.

47-51. (CANCELED)
